[github.com/luisnquin](https://github.com/luisnquin)

I'm a Software Developer with over 4 years of experience across back-end, front-end, mobile development, DevOps, and Linux systems. My preferred stack includes tools like Go, Node.js (TypeScript), Encore, AWS, Nix, and PostgreSQL, along with web and mobile technologies.

I've worked mainly in SaaS and startup environments, including a well-known French HR tech company and fintech projects. I'm always looking for smarter and efficient ways to develop software following the best industry standards.

## PROFESSIONAL CAREER:

### **Bit2Me**

*Senior Backend Developer (Oct 2025 - now)*

**Technologies:** Node.js, NestJS, TypeScript.

### **Qompa**

*Senior Software Developer (May 2024 - Sep 2025)*

My impact in the startup was mainly in team leadership, development with making decisions in the technological area of the company.

- CI/CD workflows to heal the time and stress of my companies while delivering new app features.
- App and backend development with React Native and Encore.dev (Node.js) respectively, including technical documentation of every process and business rule applied to our system to work as a guideline in the future.
- Designed and maintained a microservices-based backend using pub/sub and async patterns, building fault-tolerant services that power key parts of the business.
- In charge of code reviews, made technical decisions for the team, and ensured CI was working properly while keeping good standards.
- Collaborated with multidisciplinary teams to ensure effective communication and alignment on project goals and technical requirements.
- Focused on automated and mock testing workflows to ensure a smooth UX in the mobile app, including testing with Maestro for the most critical flows.
- Integration with external providers and platforms like Prometeo, Truora, Clerk, OneSignal and SUNAT using available APIs and scraping techniques.
- Implemented proactive monitoring with early detection to catch potential bugs, ensuring backend stability and resolving issues promptly when alerts were triggered.

**Technologies:** Encore.dev, Node.js, NestJS, React Native, TypeScript, Firebase, GCP.

## **Inversiones.io**

*SRE Consultant (Jul 2024 - Jan 2025)*

Focused on mentoring the internal team, shaping the architecture roadmap and contingency plan for the platform's future. I've applied my knowledge on CI/CD and cloud technologies like AWS, Cloudflare and Terraform.

## **Inversiones.io**

*Site Reliability Engineer (Jan 2024 - Jul 2024)*

My mission was to automate delivery processes, migrate to a more reliable and scalable architecture, and play a key role in architectural decisions that are now reflected in the heart rate of the platform for investors. *Really amazing experience! :)*

- Cost optimization and modernization of the platform architecture in just half a year.
- Introducing CI/CD practices to deliver new features and fixes without developer effort and service downtime.
- Establishment of reproducible infrastructure using Terraform.
- Shared knowledge of DevOps practices, emerging technologies, industry best practices, and modern Git workflows, impacting the technology team's mindset.
- Taking initiative in adopting self-hosted services for management, documentation that enhanced internal company processes.
- Planning and development of new features for the V2 intranet and platform on the backend.
- Investment in company tooling.

**Technologies:** Go, AWS, Terraform, Node.js, TypeScript, NestJS, Docker.

## **WiserSKILLS - NEOBRAIN**

*Full-Stack Developer (Jun 2023 - Dec 2023)*

I've been a key element in my team by improving critical workflows, developing and delivering more features for the platform's backend and frontend. My goals in the project have had a big impact in the teams of development and operations.

- Improvements in the software reliability redefining and improving critical services with E2E, integration and unit tests.
- Migration of services from WebSocket to a REST architecture.
- Better response time in key features of the company's main products (in the best case, X58 better than before).
- Configuration, deployment and monitoring of QA, UAT and PROD environments in more than 30 applications.
- Developed company tooling that significantly optimized processes for the operations team.

**Technologies:** Go, ArangoDB, Vue.js 3, TypeScript, Kubernetes and ArgoCD.

## **WiserSKILLS - NEOBRAIN**

*Backend Developer (Feb 2022 - Jun 2023)*

I was responsible for the development and maintenance of the server. My impact has always been considered by my teammates and administration.

- Implementation of SOLID principles and hexagonal architecture.
- Improved response time by 92.5% on critical dashboards.
- I dealt with multiple cases of race condition issues.
- Managed over 20 deployed servers using ArgoCD and Kubernetes.

## **Desstorm**

*Web Developer (Oct 2021 - Dec 2021)*

**Technologies:** JavaScript, Firebase, HTML, CSS, AWS.
